Ritualistic & Occult Crime Scene Investigations

**Lauderhill Police Department
6279 W. Oakland Park Boulevard
Lauderhill, FL 33313**

0800-1700

Phil Sanfilippo, 800.438.7884 ex 1025
phil@tritechusa.com

This updated Ritualistic and Occult Crime Scene Investigations course is a comprehensive workshop designed to provide crime scene analysts, law enforcement professionals, and other investigators with an extensive understanding of crime scenes containing symbolic and unfamiliar evidence. Investigators will be introduced to the types of crimes most often associated with occult activity, crime scene clues, investigation strategies, and an overview of active groups. Crime scenes, forensic and symbolic evidence involving the ritual practices of Satanism, Santeria, Voodoo, Palo Mayombe, and the Goth, Vampire, and Fetish Scenes will be presented. New to the course is a block of instruction dealing with ritualistic practices of human traffickers.

Palm Print Search and Comparison Techniques
Plantation Police Department
451 NW 70th Terrace
PLANTATION, FL 33317

0800-1700
Phil Sanfilippo, 800.438.7884 ex 1025
phil@tritechusa.com

Many latent print examiners, novice and expert alike, find conducting analysis and comparison on palm prints and the lower joints of the fingers to be challenging. However, there are many clues in the friction ridge skin of the hands that can make orientating, searching, and comparing these prints very easy. This three-day Palm Print Search and Comparison Techniques workshop is designed to introduce you to those clues to assist you in this process and help speed up the amount of time you spend trying to conduct your casework. By knowing these clues, the work you do on palm prints and the lower joints of the fingers will be quicker and more productive. Eventually, as you practice these hints over time, you will find that palm prints and lower joints of the fingers can be just as easy as fingerprints!

0800-1700 Daily

Crystal Burts, 352-341-7491

cburts@sheriffcitrus.org

24-Hour Workshop: Forensic Bloodstain Recognition Using the Chemical Enhancement and Identification of Blood

Instructors: Sharon L. Plotkin M.S. CCSI

Purpose:

The purpose of this workshop is to introduce crime scene and law enforcement personnel to bloodstain reconstruction and documenting crime scenes with blood evidence through photographic and sketching techniques. Bloodstain reconstruction to include passive versus force, angle of degrees, forward/back spatter and measuring of bloodstains in order to reconstruct blood stain patterns on crime scenes will also be examined. Blood enhancement and detection techniques and presumptive blood testing will also be introduced in the class utilizing chemicals.

Power point lectures and many hands on practicum's will be provided to all those attending in order to achieve these objectives. Objectives:

Day one: Documentation

Photography

How to work with available light

Using camera settings (ISO, FStop, Shutter speeds, Exposure Value, White Balance)

Crime scene photography

Oblique lighting

Macro photography

Sketching

Techniques

Measuring crime scenes

time allotted: 8 hours Day two: Bloodstain reconstruction

Discuss and examine Bloodstain patterns

Passive versus force

Surface textures

Angles of degrees

Application of force to create patterns

Documentation of bloodstain patterns

time allotted: 8 hours

Day three: Blood enhancement and detection

Utilizing chemicals including Coomassie Blue, Amido Black and LCV to enhance blood stain patterns that are present

*Utilizing chemicals such as Bluestar to detect blood that is not visible
Phenolphthalein testing, OBTI presumptive blood tests for presence of blood*

time allotted: 8 hours

Total hours: 24

May 15, 2020

Forensic Pieces

4400 Bayou Blvd. Suite 30A

Pensacola, FL 32501

Crystal Merrell, (850) 332-0141

CRYSTAL@FORENSICPIECES.COM

Any deliberate effort made by an offender before police arrive to alter the pristine condition of a crime scene to purposely thwart the investigation and frustrate the overall criminal justice process is the essence of crime scene staging. Crime scene staging could be increasing due to public fascination with crime scene related media, enhanced awareness of forensic science application, and/or offenders' belief in their understanding of how crime scenes should look. This comprehensive, 24-hour course is designed for crime scene investigators, detectives, crime laboratory analysts, and other forensic professionals involved in crime scene examination related work. This course explores what is known about crime scene staging and instructs students on how to use a new methodology for the early detection and analysis of potentially staged crime scenes. This course also integrates critical documentation techniques used to create a permanent record of bloodstain pattern evidence and/or firearms-related incident evidence for the purpose of a comprehensive, multi-disciplinary crime scene reconstruction towards supporting or refuting claims made by a would-be crime scene stager.

0800-1700
Phil Sanfilippo, 800.438.7884 ex 1025
phil@tritechusa.com

Investigative Analysis and Crime Scene Reconstruction is a challenging, forty hour course, designed by veteran field experts for detectives, crime scene investigators, evidence technicians, and others involved in crime analysis. Through both lecture and practical exercises, investigators expand their skill sets by learning and practicing accepted, tested methodologies for objective analysis of evidence. This is not a crime scene processing course; it is, rather, an exploration of expanded ways of thinking about information and evidentiary relationships in investigations.

This course is specifically designed with the goal of enabling students to pass whichever crime scene certification level examination that they are preparing for in the near future. This is a concentrated and fast-moving review of either two or three books depending on the examination that you are testing to pass. Every book review will have pre-testing and post-testing composed of hundreds of extracted questions covering every chapter so that students will know their areas of strengths and weaknesses. Whether novice or experienced, this class is a must for maximizing the chances of successfully passing the examinations to improve your credentials and professionalism by becoming certified in the crime scene specialty. Students who attend this course will have a distinct advantage over those who have not attended this dedicated and intensive review course when it comes to testing for the IAI certification examinations. As always, the International Association for Identification Crime Scene Certification Board will work with the host and hosting facility to facilitate a proctor being present for the last day of class in order for the students to sit for the examination. If you wish test after this course, you must have your application submitted and approved at least (60) days prior to testing and be familiar with the application requirements that can be found at the following link:https://www.theiai.org/crime_scene.php THIS COURSE IS A BOOK REVIEW: In order to maximize benefits from taking this course, any registrant must read and bring each book used for the module being tested or studied for, listed below.
